

Premium Advanced Ultra Violet System

Clean, safe water is available at every tap in your home. Your water is free from harmful bacteria.

Have peace of mind when you are brushing your teeth, having a shower or when you are cooking.

How does UV work?

Ultraviolet (UV) water treatment works by exposing microorganisms (Viruses and Bacteria) to UV radiation, via a special UV light bulb, which disrupts their DNA and disables their ability to replicate.

Bacteriological contamination can be present in all water supplies, such as E-Coli and Coliform, especially in rural areas. The quality of drinking water can change with time and become contaminated with harmful bacteria.

The H2O4Life Premium UVFS High Flow, 3 stage Ultra Violet (UV) system is the safest, most reliable and highly efficient way to treat your water. UV does not change the taste, colour or odour of your water, it simply removes the risk of illness caused by microbiological contaminants.

Benefits:

- Made in Canada
- Effective – Destroys 99.99% of Viruses and Bacteria (E-coli, Coliform, Norovirus, Cryptosporidium)
- Chemical Free – No harmful chemicals need to be added
- Reliable – Works night and day, 24/7, consistently keeping water safe
- 100% peace of mind - Treats every tap in your home

Premium Advanced Ultra Violet System

Clean, safe water is available at every tap in your home.
Your water is free from harmful bacteria.

Features:

- Made in Canada
- 3 Stage System
- 1st and 2nd Stage Sediment Filtration
- 3rd stage Ultra Violet Sterilization
- Pressure Gauges for Pre-filter for Easy Monitoring Pressure
- High Output UV Lamp
- Canadian Made CSA Approved Ballast
- Quality Medical Grade Stainless Steel Chamber and Connection
- Lamp Failure Alarm (audible and visual)
- High Flow 1" Connections
- Built-in Lamp Change Notification
- 9000 Hour Rated UV Lamp

H2O Advanced UVFS

Part#	Description
H2O UVFS 10	Up to 8 gallons per minute
H2O UVFS 20	Up To 12 Gallons per minute

Technology that inspires healthy living
